

Stopping distances

In the first column write down your estimate of the stopping distance for each speed, then go outside and measure out that distance and check your estimate is reasonable, alter if necessary. In the next column fill in the accepted stopping distances and then note the differences in the final column.

Car speed (mph)	Estimate (m)	Highway code (m)	Difference (m)
 20mph			
 30mph			
 40 mph			
 50 mph			
 60 mph			
 70 mph			

Write a few sentences using what you have learnt from this activity about how to travel safely.
